

“Keeping It Real”

Things You Wish the Books Told You - Scoping Skills!

October 22, 2018

Bring your real-world work and learn how to apply the techniques directly to your challenges!

Have you ever read a book or attended a class and thought, “Wow that is amazing, but I don’t know how this applies to my work?” This situation isn’t unique, it’s a common reaction.

About the Course

This course is different from other courses you are used to! We will focus on teaching scoping techniques. You bring in your REAL-WORLD WORK and I will teach you how to apply them! Incorrect or inadequate scope is a root cause for project failures. Learn how to create success with scoping techniques

What to Expect

Students will be exposed to activities and techniques project managers and analysts should use. Understanding scoping with an analysis viewpoint will dazzle your customers and create value! Learn to apply scoping techniques such as context data flow diagrams, structured problem statements and more with hands-on guidance to apply them to your work project. Students should bring in examples of their actual work that they can share and discuss with the instructors. Together the class will walk through these examples. I have plenty of examples to use to teach if you don’t have any to bring!

About the Instructor

Heather Mylan-Mains is a certified business analysis professional with years of consulting, teaching, coaching and speaking experience around business analysis, project management, process improvement and working with collaborative teams. Heather brings an energetic and passionate side to the soft skills of delivering value and getting things done.
